## Editorial Board Mathematical Games Section

**Aims and Scope.** This section is devoted to, but not restricted to, the mathematical and computational analysis of games. It covers *multi-person games*: geometrical, combinatorial, positional, probabilistic, random, recursive and Ramsey-type games, games with perfect and imperfect information, games with and without chance moves and games against Nature as well as infinite games; *one-person games*: puzzles, pebbling, tiling and others; *zero-person games*: cellular automata and others. It also covers connections or applications of games to areas such as complexity, graph and matroid theory, networks, coding theory, logic and surreal numbers.

Papers describing and analyzing algorithms or computer programs related to games are welcome. Only papers with original and nontrivial mathematical contents will be considered for publication.

## Editorial Board Surveys and Tutorial Section

**Aims and Scope.** This section contains expository papers (surveys or tutorials) dealing with important topics, areas or developments in any part of theoretical computer science. Papers should give a comprehensive and original treatment of the ideas, results and key proofs in the area they cover, and should also contain an extensive bibliography. Each paper in the section (survey or tutorial) should provide an expert introduction to a modern research area in theoretical computer science for which no prior treatments of similar extent have been given.

## Editorial Board Electronic Notes in Computer Science

ENTCS is a venue for the rapid electronic publication of the proceedings of conferences, of lecture notes, monographs and other similar material for which quick publication and the availability on the electronic media is appropriate. Volumes in the ENTCS series are published using the electronic archives of Elsevier Science B.V. (<http://www.elsevier.nl/locate/entcs>) Organizers of conferences whose proceedings appear in ENTCS, and authors of other material appearing as a volume in the series are allowed to make hard copies of the relevant volume for limited distribution. For example, conference proceedings may be distributed to participants at the meeting, and lecture notes can be distributed to those taking a course based on the material in the volume.
